

Case Study – Consulted A Pharma Company On Fixed Dose Combinations Of Cannabinoids Based APIs

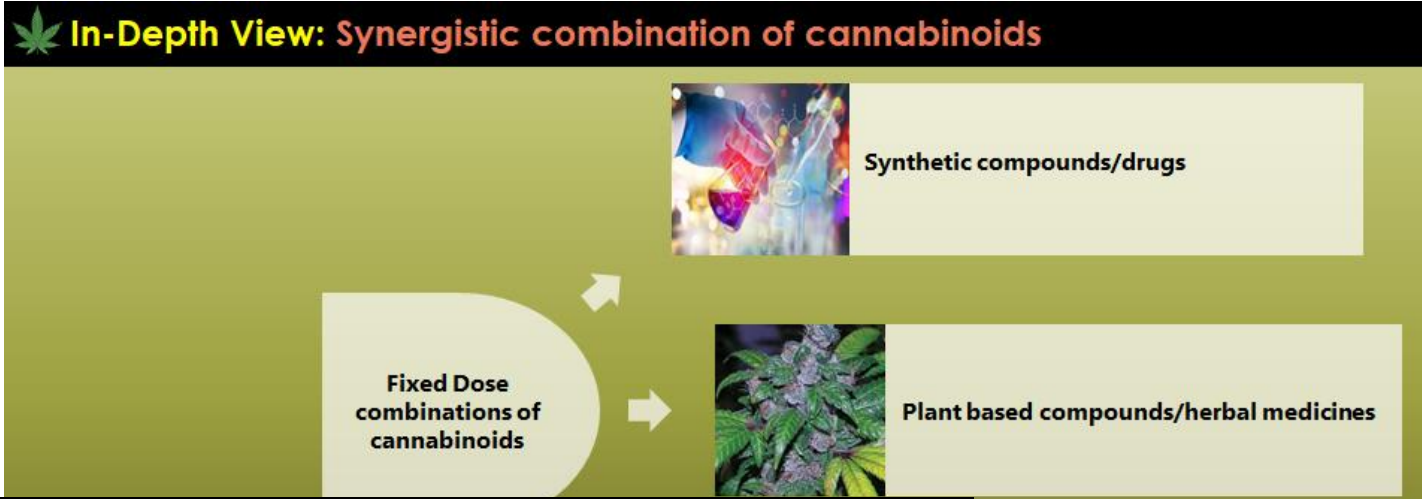

Value Delivered – Client was able to use this analysis in his meeting to discuss the strategy with his team for direction of research and product development.

Problem to be solved – Client was interested in knowing the fixed dose combinations of cannabinoids and the white spaces that exist for further research.

Solutions offered – GreyB studied research papers, patents and marketed products to extract information corresponding to FDCs of cannabinoids. After studying the synergistic combinations GreyB provided information on combinations resulting in –

- Increased therapeutic efficacy
- Reduced adverse effect of drugs
- Pharmacokinetic advantages
- Reduced dose of individual drugs

While providing this information GreyB also provided indications of whitespaces along with other insights which client wasn't expecting.

In-Depth View: Combination with natural compounds
